

SeaGlass Technology Managed IT Services & Solutions

*Helping Organizations Thrive at the Intersection of Business and
Technology*

How Important is Technology in Your Business?

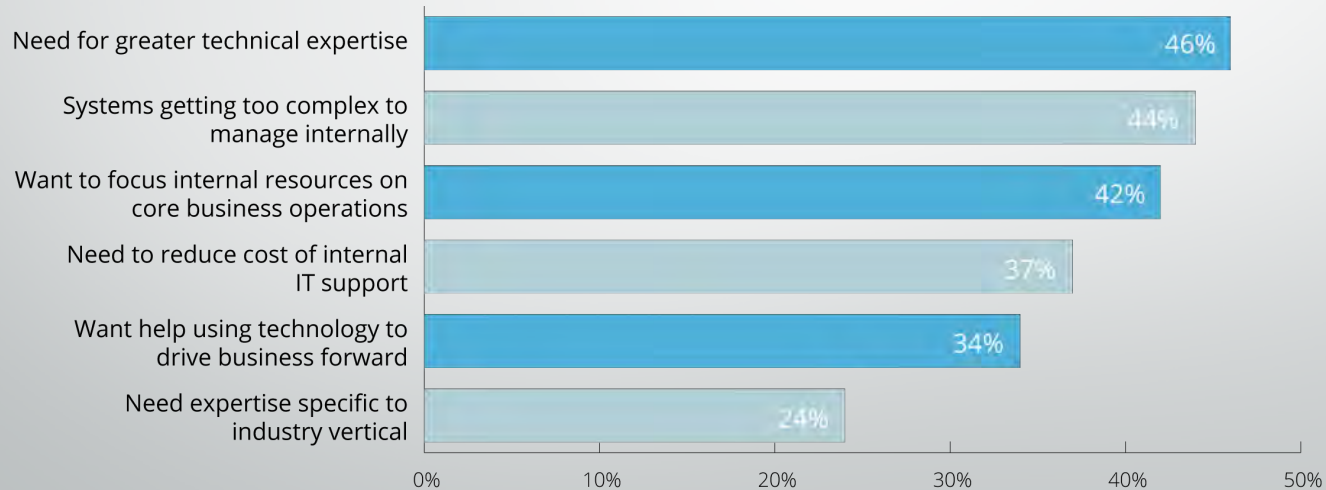

Is Your IT Infrastructure at Risk?

- Have you assigned appropriate access levels and authority to restrict data and applications to the right people?
- Can you create permission reports that tell you which devices and personnel have access to data and applications?
- Are the connections you use to access online services protected against unauthorized users, malware and other risks?
- Are your data and applications password protected, and are your employees using sufficiently strong passwords?
- Do you use automated backup programs for data protection, rather than random and irregular manual backups?
- If regulators arrive at your door today, are you confident you comply with legal and regulatory mandates for your data?

How Managed Services Fulfills the IT Needs of SMBs

SMBs must balance a range of challenges in managing their IT function because they don't have the skills or resources required to fully meet their needs. To address this problem, many businesses have turned to the support of managed services providers (MSPs). Below are the top drivers why SMBs are leveraging managed services.

SEAGLASS
—TECHNOLOGY—

SeaGlass Technology is a consulting-oriented Managed Service Provider, intending to fill in the market need for a professional, customer-focused MSP. The company emphasizes service and support to differentiate itself from more price-oriented competitors.
